ECONOMIC INDICATORS

Ohio's Job Growth Relative to the USA's Job Growth

Ohio's Sub-Par Job Growth Streak for 122 Consecutive Months Breaks All-Time Record Again

*By George Zeller
Economic Research Analyst
May 2006 Update*

Why is this indicator important?

Throughout most of its history, Ohio has been considered a very typical USA state. The state's industrial structure has paralleled the industrial structure of the nation as a whole. As a result, employment growth trends within Ohio have generally followed the USA business cycle very closely. During recessions, Ohio lost employment and earnings, while during recoveries Ohio gained employment and earnings. These patterns in Ohio closely matched similar patterns in the rest of the United States.

When the United States government began releasing reliable statistical information on employment in the states after the end of the Great Depression, Ohio generally matched or exceeded employment growth trends in the rest of the country. During the 1940's, Ohio's job growth exceeded the USA national average during 70% of all months of that decade. In subsequent decades, Ohio's job growth was less robust in comparison with national trends. But, Ohio's job growth generally paralleled USA job growth during the 1950's, and the 1960's. This pattern vanished during the 87 months between September 1977 and December 1985. Ohio's job growth rate was below the USA national average for all 87 months of the period between 9/77 and 12/85. These 87 months coincided with the very severe double dip recession of the 1979-1983 period. That recession hit Ohio very hard, causing tremendous damage to Ohio's manufacturing job base.

Following the 1980's recessions, Ohio returned to extended periods of job growth in parallel with the national business cycle. But, that pattern ended in March 1996. In February 1996, Ohio's job growth exceeded the rate of job growth in the USA during that month. During March 1996, in a development little noticed at the time, Ohio's job growth was slower than the USA national average. This unfortunate pattern of sub-par job growth has continued for every single month of all years since then. Ohio has not experienced even one month of above average job growth at any time since February 1996.

Definition

Job growth figures cited in this report are from the United States Department of Labor. The Ohio Department of Jobs and Family Services Labor Market Information Division is the state contractor to the Department of Labor during the production of these statistics. Data are from the monthly Current Employment Statistics. All recent months are subject to revision, particularly during the annual rebenchmarking process to the ES-202 complete count of jobs. A major revision of these employment figures was made in March 2006. All years between 1939 and 2005 have already been revised as a result of that process. Job growth is measured in this report as the percentage change in employment in comparison to the number of jobs in the same month of the previous year, both within Ohio and within the United States.

How Are We Doing?

In the most recently available figures for April 2006, Ohio's job growth rate during the year since April 2005 was 0.5%. In April 2006, the rate of job growth in the USA was 1.4%. Ohio actually lost jobs in December 2005 and both January and February 2006, with small gains of 6,000 jobs in March and 17,500 jobs in April.

April 2006 was the 122nd consecutive month when Ohio's job growth was below the USA national average. This is by far the longest streak of sub-par Ohio job growth in the history of job statistics in the United States.

The United States first registered job growth during a recovery from the 2000's recession in December 2003. Ohio's labor market recovery began later during March 2004. But, Ohio's recovery was well below rates of simultaneous recovery that were registered in the USA during all months of 2004 and 2005. During the last month of 2005 and the first two months of 2006 there was no monthly recovery at all in Ohio's labor market.

The unfortunate Ohio streak of sub-par job growth performance for 122 consecutive months is a currently active streak. **This has never happened before in the prior history of Ohio.** The 122 months mean that following a full decade of sub-par job growth for 120 consecutive months, Ohio has now entered the first month of a second decade of slow job growth in Ohio. The sub-par job growth performance in the state of Ohio remains both an acute and chronic problem in the state, as job growth fails to provide sufficient employment and earnings for all Ohio residents. This has been true during both recessions and recoveries. During recoveries Ohio's employment growth is weaker than simultaneous growth in the rest of the United States. During recessions, Ohio loses jobs more rapidly than the rest of the USA does. This continuously weak job growth is a direct cause of Ohio's weak population growth. The situation certainly is among the most urgent unsolved problems that confronts the state of Ohio.

Acknowledgment

The Center for Community Solutions thanks the Cuyahoga County Board of Commissioners for their important financial support that made this report possible.
